

What is claimed is:

[Claim 1] A support beam for plant displays wherein said support beam comprises:

a structural member for hanging plant displays there from; and
a spraying tube attached to said structural member to provide spraying to plant displays hanging from said structural member.

[Claim 2] The support beam of claim 1 wherein said structural member includes:

an internal attachment mechanism for said spraying tube.

[Claim 3] The support beam of claim 1 wherein said structural member includes:

a clip mechanism for attaching said spraying tube to said support beam.

[Claim 4] The support beam of claim 1 wherein said structural member includes:

an internal opening; and

an attachment mechanism within said internal opening for attaching said spraying tube in said internal opening.

[Claim 5] The support beam of claim 1 wherein said structural member includes:

an internal opening; and

a clip mechanism for attaching said spraying tube within said internal opening.

[Claim 6] The support beam of claim 1 wherein said structural member includes:
a support surface for supporting hanging displays.

[Claim 7] The support beam of claim 1 wherein said structural member includes:
an attachment mechanism for attaching said structural member to a display structure.

[Claim 8] A support beam for hanging displays there from, said support beam comprising:
a structural member for attachment to a display structure; and
an attachment mechanism for securing a spraying tube to said structural member.

[Claim 9] The support beam of claim 8 wherein said structural member includes:
an internal opening extending downward from said structural member; and
said attachment mechanism mounted inside said internal opening.

[Claim 10] The support beam of claim 8 wherein said structural member includes:
at least one clip member for attaching a spraying tube to said structural member.

[Claim 11] The support beam of claim 8 wherein said structural member includes:
an internal opening extending downward; and
at least one clip member for attaching a spraying tube to said structural member inside said internal opening.

[Claim 12] The support beam of claim 8 wherein said structural member includes:

a mechanism for attaching said support beam to a display structure.

[Claim 13] The support beam of claim 8 wherein said structural member includes:

an external surface for supporting hanging displays.

[Claim 14] A support beam for hanging displays there from, said support beam comprising:

a structural member for attachment to a display structure;

an external surface on said structural member for supporting hanging displays;

an internal opening on said structural member; and

an attachment mechanism in said internal opening for securing a spraying tube to said structural member.

[Claim 15] The support beam of claim 14 wherein said attachment mechanism includes:

at least one clip member for attaching a spraying tube to said structural member.
